Andrei Neculau

Andrei Neculau - Logical ability

Alva's logic test assesses logical ability, i.e., how efficiently one processes complex information and draws accurate conclusions from it.

The standard score is an estimation of logical ability, compared to other people in the working population.

Above average

93rd to 98th percentile.

Your score on the logic test is 9, which is above average.

* The most common standard scores are 5 and 6. The percentile ranges for these scores are wide due to the fact that they cover a large proportion of the population.
